

NPN Silicon Germanium RF Transistor

- High gain ultra low noise RF transistor
- Extremely small and flat leadless package, height 0.32 mm, ideal for modules
- Provides outstanding performance for wireless applications up to 10 GHz
- Ideal for WLAN applications, including routers and access points
- Based on Infineon's reliable high volume SiGe:C technology
- Outstanding noise figure NF_{min} 0.5 dB at 1.8 GHz
Outstanding noise figure NF_{min} 0.8 dB at 6 GHz
- Accurate SPICE GP model enables effective design in process
- High maximum stable and available gain
 G_{ms} = 24.5 dB at 1.8 GHz, G_{ma} = 15 dB at 6 GHz
- Pb-free (RoHS compliant) package

ESD (Electrostatic discharge) sensitive device, observe handling precaution!

SPICE GP (Gummel-Poon)

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website www.infineon.com/rf.models.

Please consult our website and download the latest versions before actually starting your design. You find the BFR740L3RH SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitics and is ready to use for DC and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device. The model parameters have been extracted and verified up to 10 GHz using typical devices. The BFR740L3RH SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself. Besides the DC characteristics all S-parameters in magnitude and phase, as well as noise figure (including optimum source impedance, equivalent noise resistance and flicker noise) and intermodulation have been extracted.

Datasheet Revision History: 8 September 2010

This datasheet replaces the revision from 30 March 2007. The product itself has not been changed and the device characteristics remain unchanged. Only the product description and information available in the datasheet has been expanded and updated.

Previous Revision 30 March 2007	
Page	Subject (changes since last revision)
1	AEC Q101 label removed
2	Typical values for leakage currents included, values for maximum leakage currents reduced
4	SPICE model parameters shifted from datasheet to the internet simulation data section
6,7	NFmin and GammaOpt Charts updated
